Mysteriously perfect. Something behind this mask lays quiet. Hidden. To the world she is beauty but underneath is pain beyond her years. She uses this as a defense but at the same time, she is yearning to be known. Everyone assumes who she is and she plays along because if you really knew her, you just might not like her. She is broken and fragile, but she is determined to break through the perfection so that she may build herself up from within. One day, her heart of gold will shine from within and she will conquer rather than be defeated.
Equal AND Different

- Get addicted differently
- Different reasons
- Progress faster
- Recover differently
- Relapse differently

Recovery is a natural for women!
Research

Only 8% of substance abuse research is about women’s needs – there’s not much out there!
Caron Women’s Study
Caron Study

• Polled 100 moms who have completed residential treatment and have been in Recovery for up to 1 year

• The Findings
  ➢ 46% were between the ages of 46-56 currently
  ➢ 39% entered treatment for the first time between the ages of 46-55
  ➢ 71.7% were married
  ➢ 41.4% had 2 children
  ➢ 87% were abusing alcohol and were using it in their own homes vs. going to bars
  ➢ Over 44% were abusing prescription drugs (23% benzo’s, 21% opiates)
  ➢ Over 70% did not use drugs or alcohol while pregnant
  ➢ Prior to recovery, 60% were driving UTI at least once a week
Caron Study

Top 5 contributing factors to addiction:

1. Stress or anxiety related to motherhood (49%)
2. Romantic relationships (47.4%)
3. Pressure from family and friends (37%)
4. A traumatic experience (35%)
5. General feeling of boredom (35.3%)
Caron Study

• Over 30% of women were reluctant to seek treatment because they were worried about leaving their families

• However, 55% sought treatment because their families asked them to
Caron Treatment Centers

Q6 What was your employment status at the time you entered treatment?

Parenting Collage: Redesigning a New Life and Telling a Different Story
Addiction is Messy!

- Brain disease
- Spiral downward
- Progressive
- Family and friends go down too
- Role central to stability of family (network)
- Hiding and sneaking
- Neglect of self
- Preoccupation “Monkey Chatter”
The Female Brain

• Every brain begins as a female brain
• 8 weeks after conception testosterone kicks into the male brain
  – Shrinks communication center
  – Reduces hearing cortex
  – Makes the part of the brain that processes sex twice as large

_The Female Brain_, Louann Brizendine, 2006 Morgan Books

Recovery is a natural for women – wired for connection.
Brain Plasticity

• People can learn skills to calm the emotionally reactive area of the brain
• People can learn to avoid triggers that activate the emotional area of the brain
• People can learn new skills to enhance the decision making area of the brain and think through decisions rather than respond impulsively
The 2010 National Survey on Drug Use and Health (NSDUH) estimated that 2.4 million Americans abused prescription drugs for the first time within the past year. More than one half of them were female, and two-thirds of those were over the age of 17. That means approximately 800,000 adult females, or 2,191 women a day, began abusing prescription drugs in this past year alone. (NIDA)
Stimulants & Amphetamine Use

• Stimulant and amphetamine abuse in adolescent girls 12-17 is 60-79% higher than it is among boys (NIH-podcast-shines-light-prescription-drug-abuse-in-women) (2010)

• Take stimulants to improve cognitive (especially 18-25 years) performance or lose weight (Volkow/NIDA)

• Older women (particularly mothers in 30’s and 40’s) turn to stimulants for similar reasons (NIH)
Common Statements Women Make to Rationalize Alcohol Abuse

• “My drinking is just a social thing. It’s not a big deal – everyone is doing it.”

• “I am way too functional to have a substance abuse problem.”

• “I don’t have a problem, I just need a little alcohol to take the edge off the stress of life.”

• “Asking for help is a sign of weakness.”

• “My family will not be able to function without me if I go into treatment away from home.”

• “My family and other priorities are more important than my personal well-being.”
• Keep in Mind…

someone who makes rationalizations regarding her drinking/drugging may not recognize that she has a problem. **She may just be coping the best she can!**

• **She will need:**

support and encouragement to evaluate her situation and determine the need to ask for help.
Five Signs and Symptoms That May Indicate Alcohol Abuse

1. **Forgetfulness**-consistent inability to remember significant details or past activities and conversations

2. **Changes in Mood**-unordinary, yet ongoing change in disposition including irregular irritability, anger, depression, lack of interest in important relationships

3. **Change in Physical Appearance**-noticeable lack of interest in personal hygiene and appearance

4. **Loss of Time**-disappearance for several hours or days without notifying family and friends

5. **Inability to Control Drinking in Social Situations**-attending social events leads to excessive drinking or daily activities are planned around drinking
"The impact of one drink on a woman is roughly equivalent to the impact of two drinks on a man. So woman who are keeping up with the men are actually subjecting themselves to far worse consequences."

Susan Foster, Director of Policy Research for the National Center of Addiction and Substance Abuse at Columbia University
Substance Dependence and Disordered Eating - Similarities

- Chronic
- Cravings
- Denial
- Preoccupation
- Shame
- Hiding and sneaking
- Medical consequences
- Compliance concerns
- Involve others
- Addiction recovery model works – 12-Step Groups
- Use similar tools, accountability, ask for help, connect with others
Drunkorexia

• Do not eat in order to save calories for alcohol
• Not eating before drinking contributes to feeling of getting drunk super fast and can lead to other health problems
• Alcohol for many eases anxiety around sex and also leads to greater risks of STD’s as guard is down
• Depletion of potassium contributing to cardiac issues and even cardiac arrest
• Both issues need to be addressed-eating and alcohol
Patterns of Women’s Use

- Women use less alcohol and illicit drugs, more prescription psychoactive drugs
- Gender gap is narrowing
- Introduced through significant relationship
- Women accelerate to injecting faster
- Alter pattern of use for caregiver responsibilities
- Progress faster

Alternating Cycles

• Addictions cycle back and forth in a patterned systematic way.
  
  ◦ Example: Alcoholism is put into remission, food addiction becomes out of control. Drinking resumes and out of control eating subsides. Over and over…
Younger Women

• Hooked faster
• Hooked using less alcohol and other drugs
• Suffer consequences faster and more severely
• Delays onset of puberty
• Hurts chances of getting pregnant later
• Causes long lasting changes to brain during brain development
• Heart damage
• Higher risk of STD’s

Older Women

• Increases risk for breast cancer (alcohol increases estrogen)
• Vulnerable to cognitive function damage
• Osteoporosis
• Cirrhosis of the liver
• Circulatory disorders
• Experience brain atrophy sooner than men
• Report more physical disabilities (stairs, walking, etc.)
• Face overall more severe, long term health problems than men
Addiction Deterioration Process

Addiction Deterioration Process
Spiritual → Emotional → Mental → Physical
(death)

Recovery Process
Physical → Mental → Emotional → Spiritual

Relapse Process
Spiritual → Emotional → Mental → Physical
(use)
Mortality

- Difficult to measure – lack of accurate reporting
- For women increase in breast cancer rates complicates benefits of light to moderate alcohol intake
- Males – 2.4 times more deaths overall
- Females – Suicide
  - 4 times more alcoholic women attempt suicide than general population
  - In some geographical areas women’s suicides outnumber men’s
- Highest mortality risk ages 35-54

(DAWN, 2003: Area Portfolios of Drug Related Mortalities)
The Most Common Mental Health Concerns for Women

- Depression
- Anxiety
- Eating Disorders
- Trauma

Need for Differential Diagnosis
Trauma and Addiction

• Addiction can be “triggered” by life events or traumatic experiences that prompt an individual to engage in substance abuse. Some of the most common triggers include drastic changes in family life (divorce, death of a family member or even kids growing up and “leaving the nest”), a job loss or retirement or a health crisis such as a major injury or illness.
Barriers to Treatment

- Lack of Child care or safe child care
- No children
- Lower wages – less money
- Role central to stability of family
- Extended family is using
- Intimate partner is using
- Can hide in less visible role at work
- Attendance problem – can blame sick child
Barriers to Treatment

- Fear of loss of Children
- Don’t see problem – think “crazy” “bad”
- Concerns about mixed gender treatment
  - Lesbian women
  - Women with trauma history
- Women who have been sex workers
- Don’t want treatment
Effective Treatment
(NIDA 2003)

• No single treatment is appropriate for all
• Treatment needs to be readily available
• Effective treatment attends to the multiple needs of the individual
• Treatment plans must be assessed and modified continually to meet changing needs
• Remaining in treatment for an adequate period of time is critical for treatment effectiveness
• Counseling and other behavioral therapies are critical components of effective treatment
Major Areas of Focus in Treatment

The Center for Substance Abuse Treatment (1994) identifies seventeen critical areas of focus for women’s treatment:

1. The causes of addiction, especially gender specific issues related to addiction (e.g., factors related to onset of addiction and social, physiological, and psychological consequences of addiction)
2. Low self-esteem
3. Race, ethnicity, and cultural issues
4. Gender discrimination and harassment
5. Disability-related issues
6. Relationships with family members and significant others
7. Attachments to unhealthy interpersonal relationships
Major Areas of Focus in Treatment
Cont’d.

8. Interpersonal violence
9. Eating disorders
10. Sexuality-Functioning and Orientation
11. Parenting
12. Grief related to the loss of children, family members, partners, and/or alcohol and other drugs
13. Work
14. Appearance and overall health and hygiene
15. Isolation related to lack of support systems
16. Life-plan development
17. Child care and child custody
Addiction

Chemicals

Feelings

Thoughts

Behaviors
Early Treatment Process

- Craving Management
- Use of Grounding Skills
- Emotion Regulation/Distress Tolerance
- Step 1 work, developing sober support
- Developing trusting relationships with staff and peers
Shame and Hiding: A Large Part of Addiction

- Shame is about feeling guilty about who one is
- Many women feel shame for just “being”
- Keeps people stuck in addiction
- “Bad” person
- Shame about the actual drug
- Shame about preoccupation
Addiction Interaction Disorder

- Brain disease—same neuro-transmitters
- In early recovery, feelings can be new and can be raw
- In recovery, people may switch addictions to cover up feelings
- Replacement and Fusion
- Various co-existing addictions can compromise recovery efforts: food, gambling, sex, relationships, work, shopping, etc.
Four Steps to Family of Origin Work

1) Undo the emotional denial they have about their history
2) Connect the past to the present
3) Challenge the beliefs they internalized
4) Learn new ways of coping and relating
Addiction Interaction Family Tree

Start using again? (Relapse Concerns)

- Lose weight (Food/Body Concerns)
- Relieve stress or boredom (Complacency)
- Improve their mood (Mental Health)
- Reduce sexual inhibitions (Intimacy)
- Self-medicate depression (Mental Health)
- Increase confidence (Self-Esteem)

Individual High-Risk Situations

- Cravings
- Beginning or ending romantic relationships
- Physical pain
- Spending time alone
- Hormonal changes
- High stress or after periods of stress

- Milestones in recovery
- Anniversary “freakies”
- Complacency
- Boredom
SAMHSA’S Definition of Recovery

“A process of change through which individuals improve their health and wellness, live a self-directed life, and strive to reach their full potential.”

Health, Home, Purpose, Community
My Public Mask
Private Mask
Ongoing Recovery Concerns

• Physical concerns
• Mental health concerns
• Feeling a void
• Miserable with cross-addiction
• Dry drunk
• Self-sabotage
• Complacency
• Character defects

*From* Caron’s *A Woman’s Guide to Recovery*, 2006
Women and What Works
Keys to Recovery and Living a Sober Life

• Women respond better to treatment
  ➢ Women-focused addiction treatment sensitive to the needs of women can be highly effective
  ➢ There is a sense of safety and a sharing of the multiple roles women play in their lives
  ➢ Knowing you are not alone is comforting
  ➢ Women are more likely to develop a sober supportive network of other women
Women and What Works
Keys to Recovery and Living a Sober Life

• Early identification and intervention
  ➢ Recognizing you have a problem
  ➢ Listening if others are telling you they think something is wrong
  ➢ Acceptance is a big step towards recovery
  ➢ An assessment with an addiction professional can help sort out what you may need
Women and What Works
Keys to Recovery and Living a Sober Life

• Women attending Women’s Groups
  - Throughout the US women can find 12 step meetings that are gender specific
  - AA, Al-Anon, NA, SLA, GA etc. are usually recommended; for some women, this may be the first step they take where they check out a meeting and get a female sponsor
Women and What Works
Keys to Recovery and Living a Sober Life

• Women who receive treatment
  ➢ Can have a positive impact on their children
  ➢ Alcoholism not only affects the alcoholic but their family members
  ➢ Women who engage in treatment and abstain from alcohol/drugs can have a positive effect on their children
The first step is acceptance – it is not without struggle. The struggle provides opportunity to grow, love oneself, live a life of recovery and give back to others still struggling. When you enter a room of recovering Women, you will never be without support.
Program of Action

- Action, Not Feeling
- Self Soothing Plan
- Boundaries
- Expectations
- Self Care
- Just for Today
Just for Today

• Just for today
• Just for today
• Just for this day…
• Just for today I’ll…
• Just for today!
